

FAMILY PLANNING RCT RESULTS

Comparing mCPR increase to other countries in the region.

We compared the rate of increase in modern contraceptive use from our RCT intervention areas to the average national increases in Kenya, Uganda, DR Congo, Ethiopia, Cote d'Ivoire, Ghana, Nigeria and Niger. The average national increase per year is 1.2 percentage points in these countries, ranging from -1.2pp to 2.8pp. By comparison, the average increase was much greater in our intervention zones, at 4.1 percentage points per year.
